1. **All Features Included.** Every package, no matter what size, comes with ALL Features* including: All 120+ Drivers, automated e mail notification, Advanced Alarm Handler, Advanced Security, OPC, ODBC, Basic, Networking, clipart library. Any package can use unlimited multiple drivers. ***Hot redundancy** is built in standard on the unlimited I/O package only.

2. **Larger No. of I/Os:**
   - For all package sizes there is an UNLIMITED number of internal tags/variables.
   - The tag count for your package is dynamically counted during use, NOT by the size of your database.
   - You can double the number of I/O by networking to another P CIM station. This means, for
   - example, for a 100 I/O package you can poll 100 I/O directly from a PLC/CPU AND another
   - 100 different I/O from another P CIM station over a network.

3. **Sized/Priced to meet your needs:** P CIM is available in 100, 300, 800, 2000, and unlimited I/O package sizes.

4. **Full On-Line Application Editing and Modification** with NO INTERUPTION of workstation functionality.

5. **SAME DEVELOPMENT SOFTWARE** for ALL P CIM packages (P CIM, P CIM WEB, P CIM CE).

6. **Runs on ALL Microsoft Operating Systems:** Windows 95, 98, NT, 2000 (32 bit software); Windows CE (Multiple CPUs),   Windows 3.1 and DOS (16 bit software) still supported.

7. **90 Day Money-Back Guarantee**

8. **E-MAIL Notification:** P CIM can automatically provide e mail notifications on any selected event occurrence.   E mail notifications can be sent to any device which can receive e mails, such as pagers, mobile phones, PDAs, as well as PCs.

9. **Networking** (over TCP/IP and the Internet). Web Client. Connectivity via TCP/IP to P CIM CE applications. P CIM WEB Server versions are available, requiring only a standard WEB Browser on the client with complete control capability and security.

10. **P-CIM Redundancy** is a standard feature in the P CIM unlimited I/O package.

11. **New Clipart Library** of more than 3,200 items comes with ALL P CIM packages.

12. **Reporting.** TXT, DBF, ODBC, and/or integration with Crystal Reports

13. Addressing Options.
- Direct addressing (Can directly address a PLC or Internal data in graphic objects – NO Tag
- Database required.)
- Indirect addressing (alias mechanism/ tag names – simple text file links tag name with direct address.).

14. Database blocks.
- Debugging tools
- Datascope – a tool which allows viewing and modifying of any direct PLC address, indirect address, or internal address.
- Action debug window (monitors all Operator Work Station actions).
- Syntax manager.

15. Application generation
- Global replace
- Tool bar
- Cell (predefined graphic object) edit and stretch
- INI editor.
- Addressing flexibility.

16. Advanced Alarm Handler. A comprehensive management Tool which allows your alarms to be displayed in a tree fashion organized by BOTH location and function. Supports SER (Sequence Event Recorder) applications with time stamp (in mSec.) from the PLC.

17. Security. Standard security has 100 security levels available. Advanced security (in Win NT/2000 only) adds NT security options.

18. Import/Export of Database to ASCII format and TSV (Tab Separated Value), CSV (Comma Separated Variable), and SQL.

19. ODBC support.

20. SQL connectivity.

21. AutoAction definition uses a simple syntax and does not require any programming language.

22. Text file server. Read / Write from files. INI, TXT, DBF or ODBC

23. Groups Mechanism, enables one (1) display to control many objects. I.e. same display appears each time with different addresses.

24. Basic Logic Engine: Supports both scripts and logic and arithmetic expressions. Separate thread per script.

25. Supports multi screens. I.e. same display can be open on every screen connected.
